

Nex Generation Consulting

Providing Specialized Products and Services

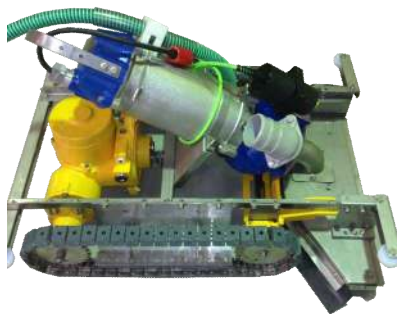

Robotic - Cooling Tower Cleaning Services

NexGen ~ McDowell Services- We utilize innovative ROBOTIC technology to clean a wide-variety of water-based applications. Cooling towers have become a major area of focus, whereas, our Remote Operated Vehicles (ROVs) are designed to clean your cooling towers while they remain in-service.

Our approach avoids all the downtime costs associated with manual out-of-service cleaning processes that usually occur during a plant outage or turn-around. Additionally, using a ROV eliminates the safety risks associated with placing personnel into confined space areas.

Remote Operated - Cooling Tower Cleaning Unit
